Introduction

A web-based tree plantation record-keeping & reporting system

[Menu](#)

The DPHE Tree Plantation Tracker is used by DPHE offices nationwide to record, monitor, and report on trees planted at offices, compounds, and project sites — accessed entirely through a web browser, no installation required.

Each tree entry captures where it was planted, its species & category, caregiver, funding source & cost, current health status, and the maintenance activity carried out — feeding the Dashboard, Map View, and six report types.

HQ (Head Office)

National level

Circle Office

e.g. Dhaka Circle

District Office

e.g. Gazipur, Feni

Upazilla / Pourashava Office

Where trees are planted & cared for

Login & User Roles

Sign in with your email & password — your role decides what you see

[Menu](#)

Role	Data Visibility (Scope)	Typical Permissions
HQ Admin	All circles, districts & upazillas nationwide	Full access — add/edit/delete, manage users, all reports
Divisional (Circle Officer)	Own Circle (all districts/upazillas within it)	Add, monitor, view records/map, reports & export
District	Own District (all upazillas within it)	Add, monitor, view records/map, reports & export
Upazilla	Own Upazilla / Pourashava only	Add, monitor, view records, reports & export

Only an HQ Admin can add/remove users or delete records — unless individually granted that permission.

Navigating the App

The main menu — what you see depends on your role & permissions

[Menu](#)

Dashboard

Quick overview of plantation activity

Add Tree Record

Log a newly planted tree

Periodic Monitoring

Record follow-up visits

All Records

Search, filter, edit, delete

Map View

See planted trees by Circle

Plant Species

Master species & category list

Reports

Generate & export 6 report types

User Management

Create & manage accounts

Dashboard

An at-a-glance summary of plantation activity in your scope

[Menu](#)

3,482

Total Records

81%

Survival Rate

64

Active Offices

By Category

Also shown: Progress-by-Circle bar chart, Monthly Trend chart, and a Recent Records table.

Progress by Circle

Fruit tree Timber tree Medicinal
Ornamental Others

Add Tree Plantation Record

*Logged every time a new tree (or batch) is planted — * = required*

[Menu](#)

Location & Site

- Planting Level (HQ / Circle / District / Upazilla)
- Circle → District → Upazilla (cascading) *
- Site Name *
- GPS Coordinates — Auto Fetch or manual entry

Tree Details

- Tree Species * (Category auto-fills)
- Date of Plantation *
- Caregiver Name & Contact
- Funding Source & Cost (BDT)
- Initial Status (Alive / Care Required / Dead / Pending)

Photo Upload

Upload photos or capture directly from a camera on mobile.
Photos are auto-resized to ≤100 KB before saving.

Saving & Editing

- Click “Save Record” to submit a new entry
- Open a record from All Records and click Edit to correct it later — the form re-opens pre-filled

Care/Maintenance Activity

A controlled dropdown that keeps large reports short & readable

[Menu](#)

Office Management

Fencing

By Caregiver

Others

Selecting “Others” reveals a free-text box to describe the activity in your own words.

Detailed Record Report:

shows the full detail you typed, including any “Others: ...” text.

Office Register & Detailed Species Reports:

group everything into just these 4 labels with counts — e.g. “Office Management: 320, Fencing: 210, Others: 45” — so a report stays readable even with thousands of entries.

Monitoring, Records & Map

Track visits, manage the full record list, and see plantations geographically

[Menu](#)

Periodic Monitoring

- Filter by Circle or search by ID/site/species
- GPS Radius search finds nearby trees on-site
- Log visit date, updated status & notes

All Plantation Records

- Filter by Circle, Category, or Status
- Search by ID, site, species, or caregiver
- View full details, edit, or delete a record

Map View

- Trees plotted geographically, grouped by Circle
- Uses GPS captured at record creation
- Spot plantation coverage & gaps at a glance

Plant Species

The master list behind the Tree Species dropdown

[Menu](#)

Every species carries a fixed Category, applied automatically wherever it's selected on the Add Tree Record form. Search by English or Bangla name to find a species quickly.

Fruit tree

e.g. Mango, Orange, Jamun

Timber tree

e.g. Mahogany, Segun

Medicinal

e.g. Neem

Ornamental

e.g. Plumeria

Others

Anything outside the above

Reports Overview

Build once, export three ways

[Menu](#)

Report Builder

- Choose a Report Type (6 available — next slide)
- Set a From / To date range
- Set Scope — HQ Admins pick any Circle/District/Upazilla; other roles can only narrow within their own jurisdiction
- Click “Generate Report” to build it on screen

Export Options

Print

Directly from the browser

CSV

Opens in Excel / Google Sheets

PDF

A formatted, shareable document

The Six Report Types

Each scoped and filtered the same way

[Menu](#)

Summary Report

Totals, survival rate, cost & an office-wise breakdown

Detailed Record Report

Every individual tree record, row by row

Office Register Report

One row per office, in
HQ→Circle→District→Upazilla order

Monthly Trend Report

Trees planted & cost over the last 12 months

Detailed Species Report

Species grouped by category, office by office

Species Report

Category & Survival Rate, most-planted first

Office Register Report — In Detail

[Menu](#)

Matches the traditional paper register format

Name of the Office

Taken from the Office field set in User Management

Tree Count

Total trees recorded for that office

Species Category

Counts per category, e.g. "Fruit tree: 150"

Offices are listed by administrative hierarchy — not alphabetically:

HQ

Circle Office

District Office

Because categories are shown as counts, this report stays compact even when a single office logs thousands of tree entries.

User Management

Available to HQ Admins (or anyone granted the “users” permission)

[Menu](#)

Creating a User

- Name, Username/Email, Password
- Role — HQ Admin, Divisional, District, or Upazilla
- Office — name & location, e.g. “Sadar Upazilla DPHE Office, Feni”
- Circle / District / Upazilla — sets their data visibility

The Office name entered here is exactly what appears as “Name of the Office” in the Office Register & Species Reports — enter it clearly and consistently.

Field-level Permissions

Beyond default role permissions, an HQ Admin can fine-tune exactly which fields and actions each role — or individual user — can view or edit, per module:

- Dashboard • Add Tree Record
- Monitoring • All Records
- Reports • Users

e.g. allow a District user to delete records, or hide the Cost field from a role.

Data Sync & Troubleshooting

How saving works, and quick fixes for common issues

[Menu](#)

Updated/Saved in Google Sheets

Your change synced successfully to the shared backend.

Sync failed

Only saved on this device. Check your connection and save again, or other users won't see it.

Quick Fixes

- Empty District/Upazilla dropdown? Select its parent field first.
- GPS auto-fetch failing? Allow location access & try outdoors.
- Report looks empty? Check the date range & scope filters.
- PDF Bangla text broken? Check your connection — the font loads once per session.
- Anything else — contact your HQ Admin.

Thank You

Grow every plantation record into a healthier, greener Bangladesh
